AMENDMENT UNDER 37 C.F.R. § 1.114(c)

U.S. Application No.: 10/554,707

Attorney Docket No.: Q90872

## AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

## LISTING OF CLAIMS:

1. (previously presented): An aromatic-polyether-type ion-conductive ultrahigh molecular weight polymer having an ion exchange capacity of 0.1 meq/g or higher and a structure comprising an aromatic-polyether-type ultrahigh molecular weight polymer in which an acid group is introduced, said aromatic-polyether-type ultrahigh molecular weight polymer having at least one structural unit selected from those represented by the following formulas (1) and (2) and the sum of the number a of the structural unit of the formula (1) and the number b of the structural unit of the formula (2) being 2 or larger:

$$\frac{\left[\left(Ar^{1}-O\right)_{m}Ar^{1}\right]}{\left[\left(Ar^{2}-O\right)_{n}Ar^{2}\right]}$$
 (1)

wherein  $Ar^1$  and  $Ar^2$  independently represent an aromatic divalent group, m and n represent repeating numbers, m and n independently represent a numeral of 10 or more, and a plurality of  $Ar^1$ , a plurality of  $Ar^2$ , a plurality of m and a plurality of n may be different respectively; and wherein the aromatic-polyether-type ultrahigh molecular weight polymer has a number-average molecular weight in terms of polystyrene of 100,000 or more.

Attorney Docket No.: Q90872

AMENDMENT UNDER 37 C.F.R. § 1.114(c) U.S. Application No.: 10/554,707

- 2. (previously presented): The aromatic-polyether-type ion-conductive ultrahigh molecular weight polymer according to claim 1, wherein the acid group is sulfonic acid group.
- 3. (original): A process for producing the aromatic-polyether-type ion-conductive ultrahigh molecular weight polymer of claim 1 which comprises introducing an acid group into an aromatic-polyether-type ultrahigh molecular weight polymer having at least one structural unit selected from those represented by the formulas (1) and (2) described in claim 1, the sum of the number a of the structural unit of the formula (1) and the number b of the structural unit of the formula (2) being 2 or larger.
- 4. (original): A process according to claim 3, wherein the acid group is sulfonic acid group.
- 5. (previously presented): An aromatic-polyether-type ultrahigh molecular weight polymer having at least one structural unit selected from those represented by the following formulas (1) and (2), the sum of the number a of the structural unit of the formula (1) and the number b of the structural unit of the formula (2) being 2 or larger:

$$\frac{\left[\left(Ar^{1}O\right)_{m}Ar^{1}\right]}{\left[\left(Ar^{2}O\right)_{n}Ar^{2}\right]} \tag{1}$$

$$\frac{\left[-\left(Ar^{2}-O\right)_{n}Ar^{2}\right]}{\left(Ar^{2}-O\right)_{n}Ar^{2}}$$
 (2)

AMENDMENT UNDER 37 C.F.R. § 1.114(c) Attorney Docket No.: Q90872

U.S. Application No.: 10/554,707

wherein  $Ar^1$  and  $Ar^2$  independently represent an aromatic divalent group, m and n represent repeating numbers, m and n independently represent a numeral of 10 or more, and a plurality of  $Ar^1$ , a plurality of  $Ar^2$ , a plurality of m and a plurality of n may be different respectively; and

wherein the aromatic-polyether-type ultrahigh molecular weight polymer has a numberaverage molecular weight in terms of polystyrene of 100,000 or more.

6. (previously presented): A process for producing an aromatic-polyether-type ultrahigh molecular weight polymer of claim 5 which comprises polymerizing by a condensation reaction at least one polymer selected from the polymers represented by the following formulas (3) and (4) in the presence of a zerovalent transition metal complex:

$$X - \left(Ar^{1} - O - \right)_{m} - Ar^{1} - X$$

$$X - \left(Ar^{2} - O - \right)_{m} - Ar^{2} - X$$

$$(4)$$

wherein Ar<sup>1</sup>, Ar<sup>2</sup>, m and n are the same as defined in claim 5, X represents a group which is eliminated at the condensation reaction, and a plurality of X may be different.

4

AMENDMENT UNDER 37 C.F.R. § 1.114(c) Attorney Docket No.: Q90872

U.S. Application No.: 10/554,707

(original): A process for producing an aromatic-polyether-type ultrahigh
molecular weight polymer according to claim 6, wherein X is chlorine, bromine, iodine,
p-toluenesulfonyloxy group, methanesulfonyloxy group or trifluoromethanesulfonyloxy group.

- (previously presented): A polymer electrolyte comprising the aromaticpolyether-type ion-conductive ultrahigh molecular weight polymer of claim 1.
- (original): A polymer electrolyte membrane comprising the polymer electrolyte
   of claim 8.
  - 10. (original): A catalyst composition comprising the polymer electrolyte of claim 8.
- 11. (currently amended): A fuel cell comprising the a polymer electrolyte membrane comprising the polymer electrolyte of claim 8 of claim 9 and/or athe catalyst composition comprising the polymer electrolyte of claim 8 of claim 10.
